## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-31 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious an electrostatic discharge (ESD) protection circuit in a semiconductor integrated circuit having a protected circuitry with all exclusive limitations as recited in claims 1 and 25, comprising an SCR for shunting ESD current away from the protected circuitry, the SCR comprising a substrate, an insulator layer formed over the substrate, an N-well and an adjacent P-well formed over the insulator layer and defining a PN junction, an anode region formed in the N-well and for coupling to a pad of the protected circuitry, a cathode region formed in the P-well and for coupling to ground, and at least one P+ trigger tap region and at least one N+ trigger tap region disposed in the P-well and the N-well respectively and spaced proximate to the cathode region and the anode region respectively and for triggering the SCR.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 5,872,379 to Lee discloses a low voltage turn-on SCR for ESD protection comprising an SCR trigger circuit having an N+/P-LDD junction.
